

Scheduling Software Updates

1. Click on the blue apple icon on the top left of the menu bar, and choose **System Preferences**.

2. Choose **Software Update** under the System heading.

3. Unclick the “Check for updates” box to discontinue software update from automatically running, or you can schedule how often you would like it to run (Daily, Weekly, or Monthly).

NOTE: Never update an operating system until you’ve first checked with the Tech Director.
